FIT AND SECURE FOOT RAIL

2.1

Measure 200mm towards the front of the vehicle from the center of the rivet in the ditch moulding shown in 2.1 and make a mark in the roof ditch. This will be the rear hole for the Foot Rail.

2.2

Position the Foot Rail in the ditch. Align the rear mount hole in the Foot Rail with the rear mark you made earlier in 2.1 and mark the remaining five holes.

Remove the Foot Rail from the vehicle.

Drill a 5mm Pilot hole in the center of the markings. Open the holes using a 12mm drill bit.

2.3

Insert the M6 Button Head Bolt (Item 12) into the one side of the Installer Wrench (Item 13). Loosely fit a Jack Nut (Item 3) to the Button Head Bolt as shown.

Using the Installer Wrench and a M6 x 30 Button Head Bolt, insert the M6 Jack Nuts into all 12 holes.

Place the assembly into a hole drilled in 2.2. Using a Battery Powered Screw Driver and a 4mm Allen Key Bit, set the Jack Nut into the hole while holding onto the handle of the Installer Wrench.

Make sure that the Jack Nut has pulled up all the way to the inside skin of the roof panel.

2

FIT AND SECURE FOOT RAIL

2.4

Place a bead of silicone around each of the Jack Nut openings inserted earlier in 2.3.

To fit the Foot Rails (Item 1LH & 1RH), place the Spacers (Item 2) over the Jack Nuts inserted in 2.3, followed by the Foot Rail (Item 1).

Place silicone on the threads of the M6 x 40 Hex Bolts and secure the Foot Rail using M6 SS Spring Washers and M6 x 19 x 1SS Flat Washers (Items 9, 10 & 11) as shown.

Do this on both the left and right side of the vehicle.

Finish off by placing M6 Nut Caps (Item 8) on the M6 Hex Bolt heads.

3

FIT AND SECURE ROOF RACK

3.1

Make sure that the wind deflector is installed before you proceed to the next step.

Refer to Rack Fitment Guide.

3.2

Fit your Roof Rack to the Foot Rails using M8 x 20 Hex Bolts, M8 x 16 x 1.6SS Flat Washers and M8 Nyloc Nuts (Items 5, 6 & 7) as shown.

3.3

Center the rack and tighten fully. Use M8 Nut Caps (Item 4) to finish off the nuts.
