Starting at the front of the windscreen as shown, measure along the Ditch Moulding towards the rear of the vehicle. Mark the ditch moulding at the following distances.

- 235mm
- 405mm
- 1280mm
- 1430mm

Using a suitable panel tool, or screw driver wrapped in tape, lift the Ditch Moulding between the marks you made. Using tin snips, cut the Ditch Moulding on the marks made in 2.1.

Be careful when lifting the Ditch Moulding not to lift it too high as this might damage the Moulding.

2.2

Looking at the Ditch, where you have just removed the Ditch Moulding, locate the four Threaded Mounting points in the vehicle's roof and remove the Protective Tape covering them.

2.3

Clean the area around the holes in the vehicle's roof using a rag and methylated spirits or denatured alcohol. Place some silicone around each hole in the vehicle's roof.

Place the plastic spacers 165mm long over the front holes (Item 7) & plastic spacers 145mm long over the rear holes (Item 6). Center the spacers in the vehicle's ditch, with the holes in the vehicle's roof.

Place some silicone in the cut outs of the spacers as shown.
